Exploring AI-Assisted Features and Built-in Analytics (Zia) in Zoho Creator

Title

Exploring AI-Assisted Features and Built-in Analytics (Zia) in Zoho Creator using the Insurance Claim Request & Processing Management application.

Aim

To study the built-in analytics, dashboard charts and report options of the Insurance Claim Request & Processing Management application in Zoho Creator, and to check whether AI-assisted (Zia) features are available in the account.

Objectives

- To look at the dashboard layout: summary cards, charts and the report.
- To note the values shown on the dashboard and understand the two pie charts.
- To study the Claim_Request_Form report and its columns.
- To learn the report display options such as List, Kanban, Calendar and Map.
- To check the account for Zia AI features and note their limits.

Software / Tools Required

- Zoho Creator
- Insurance Claim Request & Processing Management application
- Web browser with internet connection
- Zoho account (trial account)

Introduction / Theory

AI-assisted features: Low-code platforms now add AI tools that help users build apps and understand data. Zia is the AI assistant from Zoho. It can give insights, answer questions and give suggestions. Which Zia features you can use depends on your plan and edition.

Built-in analytics: Zoho Creator lets us show data on a dashboard without writing code. Summary cards show key numbers. Charts compare categories or show parts of a whole. Reports show the saved records in a table or other layouts.

Procedure

1. Open Zoho Creator and sign in with the Zoho account.
2. Open the Insurance Claim Request & Processing Management application and click Access this application.
3. In the left menu, there are two pages: Claim_Request_Form and Claims_Dashboard. Open Claims_Dashboard.
4. Look at the three summary cards at the top: Total Claims, Total Claim Amount and Average Claim Amount.

24140114

5. Look at the two pie charts: Claims by Claim Type and Claims by Claimant Type.
6. Scroll down to the Claim_Request_Form Report and read the columns and records.
7. Click the three-dot menu on the report to see the display options.
8. Check the application for any Zia or AI-assistant option and note the result.

Output

1. Full Dashboard View

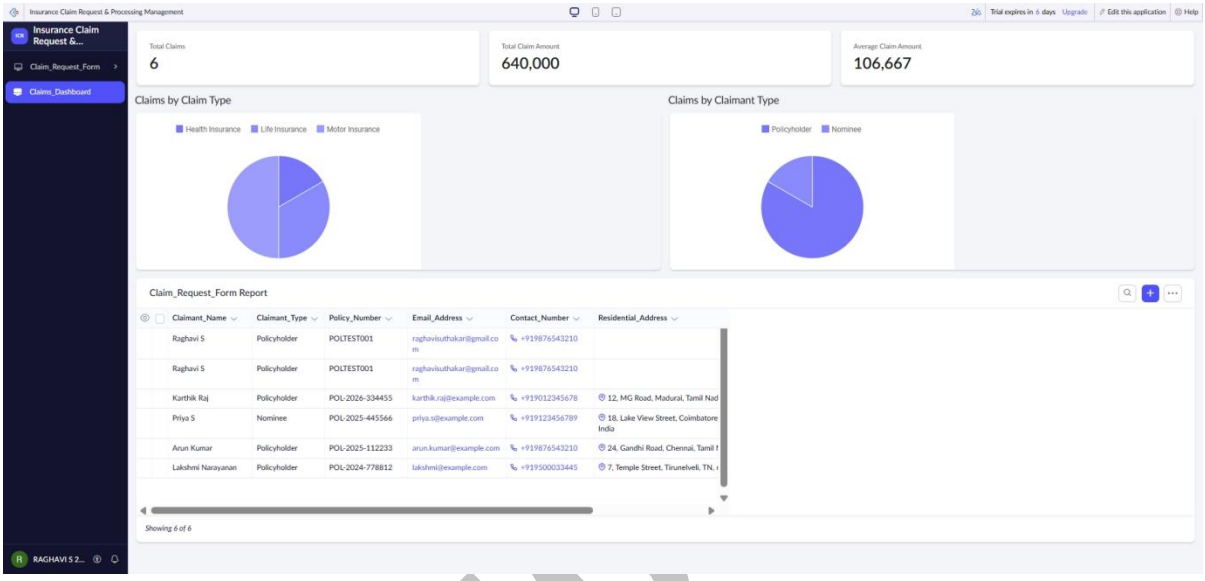

Figure 9.1: Claims_Dashboard of the Insurance Claim application

2. Summary Cards

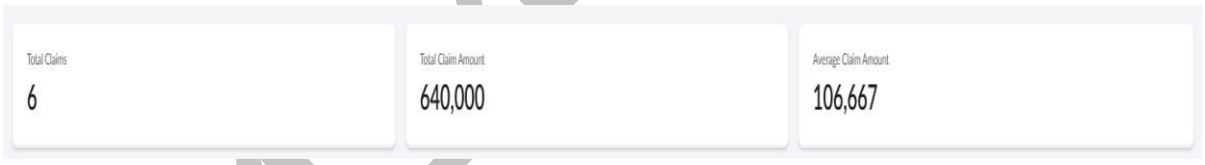

Figure 9.2: Total Claims, Total Claim Amount and Average Claim Amount

3. Pie Charts

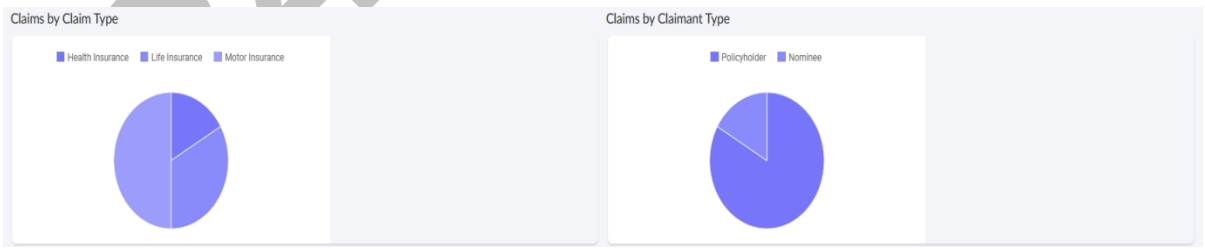

Figure 9.3: Claims by Claim Type and Claims by Claimant Type

4. Claim_Request_Form Report

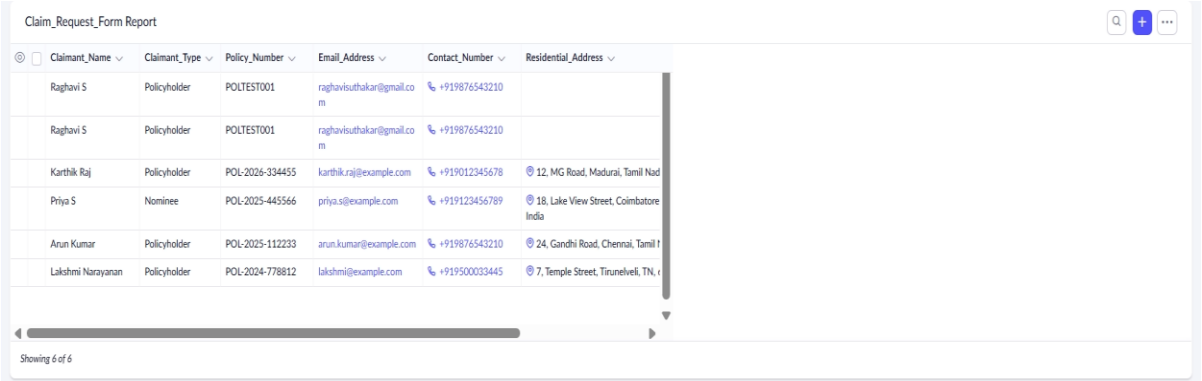

Figure 9.4: Report showing all six claim records

Dashboard Analytics

Dashboard Item	Value Displayed
Total Claims	6
Total Claim Amount	640,000
Average Claim Amount	106,667
Claim types in pie chart	Health Insurance, Life Insurance, Motor Insurance
Claimant types in pie chart	Policyholder, Nominee
Records in report	Showing 6 of 6

Report Display Options

The three-dot menu of a Zoho Creator report gives different ways to view the same records.

Option	Description
List	Records shown as rows in a table (used in this dashboard).
Calendar	Records placed on a date field.
Timeline	Records arranged in date order.
Spreadsheet	A grid that looks like a spreadsheet.
Kanban	Cards grouped into lanes by a chosen field, such as Claimant_Type.
Map	Records plotted using location data, such as the address.

Observation

- The dashboard shows 6 claims with a total amount of 640,000. The average claim is about 106,667 (640,000 divided by 6).
- The Claims by Claimant Type chart has two parts. The larger part is Policyholder and the smaller part is Nominee. This matches the report, where 5 records are Policyholder and 1 is Nominee (Priya S).
- The Claims by Claim Type chart has three parts for Health, Life and Motor Insurance. The slices are not labelled with numbers, so exact counts need a hover on the chart.

24140114

- The report has columns for Claimant_Name, Claimant_Type, Policy_Number, Email_Address, Contact_Number and Residential_Address. Email and phone values appear as clickable links.
- Two records belong to the same test policy (POLTEST001), which shows that test entries are also counted in the dashboard.
- The top bar shows that the account is a trial that expires in 6 days. Some advanced features may be limited in a trial account.

Zia (AI) Audit

No Zia option was opened, set up or used in this experiment. The dashboard works only with built-in charts, summary cards and reports. Zia features may need a higher edition or plan, so they may not be open to a trial account. They should be checked in the account settings before use.

Conclusion

Zoho Creator can show claim data in a clear way using summary cards, pie charts and a report, all on one page and without code. The Insurance Claim dashboard gave a quick view of total claims, total amount and claimant types. Zia AI features were not used here, and their use depends on the account plan.

Final Result

- The dashboard was studied and the values 6 claims, 640,000 total and 106,667 average were noted.
- The two pie charts and the Claim_Request_Form report were identified.
- The report display options, including Kanban, were reviewed.
- Zia AI features were not used or demonstrated in this account.
